

Achieve better business performance with super-fast broadband

Fibre-optic broadband for business

Have you considered telecommunications as a route to improved efficiency?

The main gripe for most companies is the difference between actual and advertised broadband speeds delivered by ISPs (Internet Service Providers). Put simply, people want a reliable and fast broadband service - free from traffic restrictions and low quality of service at peak internet traffic times. It is a reasonable expectation and one that is easily delivered by Save9. We offer a host of enterprise-class fibre, business broadband and wireless internet access packages designed for speed, security and quality of service.

Fast

Fibre-optic broadband from Save9 offers **incredible upstream and downstream performance** for emails, file uploads/downloads, teleconferencing and remote VPNs.

Secure

Prevent unauthorised internet access to your network and reduce the risk of data theft, loss and performance issues with Save9's range of **firewalls and VLANs**.

Scalable

Go beyond the limitations of your DSL broadband or leased-lines with our scalable fibre packages ranging from **1Mbps up to 1Gbps** without the need to reinstall.

Contact Save9 today and qualify for a low-cost monthly payment plan with zero up-front fees

High-speed fibre broadband available to your business with **zero install costs (limited offer)***

Putting your business needs first

Put simply, businesses want a fast and reliable broadband service - free from traffic restrictions and low quality of service. It is a reasonable expectation and one that is easily delivered by Save9.

Who is it for?

If they can possibly avoid it, companies like yours don't really want to spend money on swapping out your slower ADSL or expensive leased lines because something like fibre usually costs an awful lot of money - so, an EU funded broadband initiative delivered by Save9, was setup to help you overcome the barriers of setup and running costs.

How important is reliability to your business?

Our fibre-broadband service offers unsurpassed reliability and performance. For example - our region's fire, rescue and ambulance services are current public sector customers who rely upon the NYnet fibre infrastructure for delivering 24x7x365 emergency services.

How much does it cost?

This depends upon what speed you want, how many internet services will run on your connection and how many members of staff need guaranteed simultaneous internet access. Please get in touch so we can help you calculate your needs.

Business benefits of fibre broadband?

Beat your competitors by combining your internet telecoms and voice traffic in one service package - this means you can reach more customers whilst reducing telecoms costs - the perfect solution for businesses wanting to work more productively, communicate more professionally and keep a tighter control over costs.

- ① Faster downloads and uploads
- ② Cheaper telephone costs (Voice over IP)
- ③ Disaster recovery - remote off-site backups
- ④ Cloud computing - 'pay-as-you-go' software
- ⑤ Remote working - speedy staff access
- ⑥ Video conferencing - reduce travel expenses

How do I apply for this broadband initiative?

To qualify for your free site-survey and zero install costs please call Steve Bromham on 0845 0299999 or email info@save9.com.
